MedMinder™

Medication Management System

The MedMinder™ medication reminder and dispensing system is designed to enhance medication adherence. The pill dispenser offers users a sense of comfort knowing that their medications are conveniently organized and that they will be gently prompted to take them at the appropriate times.

The MedMinder system has a locking function to ensure the safety and comfort for the users and their loved ones. Users and caregivers will no longer worry about overdosing or mis-dosing. This feature allows users access to only the correct compartment at the correct dosage time; all other compartments will remain locked. The MedMinder system is cellular enabled eliminating the need for a traditional phone line while allowing for remote programming and updates from the MedMinder portal. The MedMinder system is designed with ease of use in mind, its simple and friendly interface has no digital readouts or buttons. The MedMinder system contains 28 large pill compartments which can accommodate an array of pill types and can be configured for multi-week dispensing.

The MedMinder portal offers users and caregivers the convenience of updating regimens and configuring the type and delivery method of notifications. Detailed reports are also available on the portal.

- Patient reminders: When it's time to take a medication, the appropriate compartment flashes. If the cup is not removed within the assigned time frame, the patient can get auditory prompts as well as optional automatic phone calls, text messages and emails.
- Remote monitoring capabilities: MedMinder keeps records of medication adherence activities. Caregivers can access this information via the Internet or receive real-time email or text message notifications.
