

Improper medication adherence can lead to serious health problems and hospitalizations. This is especially true for people suffering from chronic conditions that need to follow a rigorous prescription of multiple medications to maintain their health. Mistakes with medications can be very serious in the elderly where the adverse effects of medications can be dangerous.

When you enroll, a personalized file is created in our HIPAA compliant, secure database containing all critical information.

Medication Management

MedMinder™

The Tunstall MedMinder™ medication reminder and dispensing system is designed to enhance medication adherence. Users and caregivers will no longer worry about overdosing or mis-dosing. The MedMinder system is cellular enabled eliminating the need for a traditional phone line while allowing for remote programming and updates from the MedMinder portal.

The MedMinder system contains 28 large pill compartments which can accommodate an array of pill types and can be configured for multi-week dispensing. The MedMinder has a locking feature that allows users access to only the correct compartment at the correct dosage time; all other compartments will remain locked.

MedMinder provides rich reports regarding the medication activity. Detailed reports show when cups were taken out of the medication dispenser, when refilled and if any medications were missed. If you choose MedMinder will email you these reports pro-actively.

MedSmart™

The Tunstall MedSmart™ is a personalized medication adherence device that organizes, reminds, and dispenses pills so that they are taken properly and on-time.

At set times during the day, the MedSmart will beep, flash, and rotate, making the proper pills available for consumption. The user tilts the device and the correct pills will be dispensed, while all other doses remain safe and secure.

MedSmart is also available with event reporting and notification. Through a personalized notification system, alerts can be sent to authorized family members or caregivers to track adherence, address dosing errors, and predict refill requirements.

We connect you to the people who care, when you need it most.

The Connected Life from Tunstall

The Connected Life from Tunstall is a collection of Connected Care and Connected Health services aimed at supporting the independence, freedom, social engagement, health, and wellbeing of individuals. These solutions can be customized to an individual residents' needs and include a broad range of products and services including: Environmental Monitoring, Activity Monitoring, Mobile Solutions, and Med-Management.

A wide variety of users can benefit from medication management solutions, including people who have:

- Multiple prescriptions
- Difficulty organizing pills
- A hard time remembering
- Dexterity issues
- Difficulty reading labels
- A risk of mis-dosing

Medication Management is a Connected Care Service. These solutions use technology in the home combined with personal support at a distance to enable a resident to remain independent for as long as possible.
